

BX1350-RB boat trailer

(EC0596TI)

TIKI's new generation boat trailer combines innovative design and practicality, offering a safe and convenient transport solution for various boat types. It is designed with even the most demanding user in mind. The BX series has been developed in collaboration with boat manufacturers and users. The hot-dip galvanized welded frame single-axle trailer is designed for everyday use as well as for those who need a trailer only once or twice a year. When choosing a trailer, be sure to consider your boat's dimensions and weight including the engine, fuel, and additional equipment.

The frame with extended side beams increases stability and safety when driving. **The adjustable length drawbar allows the trailer to be adjusted according to the length of the boat and the centre of gravity.** On the winch tower, it is possible to adjust the height of the winch and the nose support, as well as the angle relative to the ground. A winch with a brake ensures comfortable and safe operation. For safer and more convenient movement of the boat without a towing vehicle, the support wheel is supported from two points. Waterproof hubs ensure a longer life for the bearings. The trailer frame is equipped with large strong mounting loops to securely fasten the boat. Adjustable side supports with double rollers help to direct the boat to the trailer more stably and straightly. Metal step-on fenders and step boards provide better access to the boat on the trailer. The trailer is equipped with waterproof flip-up LED taillights and a waterproof wiring system.
