

BX1500-RB boat trailer

(EC0597TI)

TIKI's new generation boat trailer combines innovative design and practicality, offering a safe and convenient transport solution for various boat types. It is designed with even the most demanding user in mind. The BX series has been developed in collaboration with boat manufacturers and users. The hot-dip galvanized welded frame single-axle trailer is designed for everyday use as well as for those who need a trailer only once or twice a year. When choosing a trailer, consider your boat's dimensions and weight, including the engine, fuel, and accessories.

The frame with extended side beams increases stability and safety when driving. **The adjustable-length drawbar allows the trailer to be adapted to the boat's length and center of gravity.** The winch post enables adjustment of both the winch and bow support height, as well as the angle in relation to the ground. The braked winch ensures convenient and safe use. For easier and safer movement of the boat without a towing vehicle, the support wheel is reinforced at two point. Waterproof hubs extend the lifespan of the bearings. The frame, reinforced with a firm is equipped with large, strong lashing rings for securely fastening the boat. Adjustable side supports with double rollers help guide the boat onto the trailer more steadily and straight.

Durable metal mudguards and step boards provide better access to the boat on the trailer. The trailer is equipped with waterproof flip-up LED taillights and a waterproof wiring system.
